The present sequence is the full length MuTu endogenous cellular component, MN, cDNA clone, which was isolated from lymphocytic choriomeningitis virus (LCMV) infected HeLa cells. Persistent LCMV, the exogenous MuTu transmissible agent (MX), infection increases the expression level of the MN gene. MN is a putative oncogene, and can therefore be used in the development of prods. For the diagnosis and treatment of neoplastic (NP), or pre-NP diseases. NP diseases can be treated using DNA antisense to MN transcribed mRNA, anti-MN protein antibodies can be used for the diagnosis NP or pre-NP diseases and a vaccine contg. immunogenic amounts of the MN protein can be used to immunise a vertebrate against a NP disease associated with MN antigen expression. (Updated on 25-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MN gene, protein and nucleic acid fragments - used as primers and probes in the detection of MN antigens and antibodies, and in the treatment of (pre)neoplastic disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1522

                                                                                                                                                                                                                                                                                                                        The present invention describes a method of screening for CC preneoplastic/neoplastic disease. The method comprises: (1) determining CC whether abnormal MN gene expression is present in a vertebrate; and (2) if abnormal MN gene expression is determined to be present in the CC vertebrate, determining that the vertebrate has a significant risk of the vertebrate, determining that the vertebrate has a significant risk of CC having preneoplastic/neoplastic disease. The MN gene is an oncogene and CC encodes an MN protein (also referred to as MN/CA IX isoenzyme). The MN grotein is a tumour associated carbonic anhydrase isoenzyme. The method CC is used for detecting a wide variety of preneoplastic/neoplastic diseases of the vertebrate, preferably a human. The disease detected is mammary, CC bladder, renal, urinary tract, ovarian, uterine, cervical, endometrial, CC vaginal, vulval, prostate, liver, lung, skin, thyroid, pancreatic, CC vaginal, jejunal, ileal, gastric, pancreatic duct, liver duct, gastric ducosa, pancreatic duct epithelium, small intestinal mucosa, colorectal concosa, pancreatic duct epithelium or liver duct epithelium ANY53245 represent sequences used in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     뭉
The invention relates to the inhibition of cell adhesion mediated by the MN oncoprotein (also known as the MN/CA IX isoenzyme or the MN/G250 protein). The MN protein is a tumoux-associated adhesion molecule which comparises a proteoglycan-like (PG) domain (AAB3017) which contains the protein's binding site, and a carbonic anhydrase (CA) domain (AAB03018). Abnormal expression of the MN protein is associated with tumorigenicity. The invention encompasses molecules (e.g., proteins and peptides) which which specifically bind to a site on the MN protein, threeby preventing adhesion of vertebrate cells to the protein in a cell adhesion assay. It also encompasses MN proteins or MN protein fragments which can be added to the extracellular environment to prevent the adhesion of vertebrate cells to each other. The invention also relates to the identification of the binding site of the MN protein and to a method of identifying a site
                                                                                                                                                                                                       Example 1; Fig 1A-C; 154pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                              23-OCT-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC on an MN protein to which cells adhere, comprising testing a series of CC overlapping peptides from the protein in a cell adhesion assay. The CC invention encompasses a vector comprising an expression control sequence CC operatively linked to a nucleic acid encoding the variable domains of a CC MN-specific antibody, where the domains are separated by a flexible CC linker peptide (AAB03035) and the vector inhibits the growth of a CC vertebrate preneoplastic or neoplastic cell that abnormally expresses MN CC protein. The invention also encompasses a vector comprising a nucleic CC acid encoding a cytotoxic protein or peptide operatively linked to the MN CC gene promoter, which inhibits the growth of a vertebrate preneoplastic or neoplastic cell. Also claimed is a repressor complex that binds to the MN CC gene promoter (AAA52473). MN proteins and peptides, MN-binding proteins and expetides and peptides, and expression vectors encoding such proteins and peptides and peptides and expetides and peptides and expetides and septides and section treating patients with preneoplastic or neoplastic disease (e.g., cancers) associated with or characterised by abnormal MN

Specifically, this antibody is directed towards the MN gene, a cellular oncogene known alternatively as carbonic anhydrase 9, CA9 or MN/CA9, which encodes the MN protein that is also known as the MN/CA IX isoenzyme, carbonic anhydrase IX, CA IX or the MN/G250 protein. The present invention describes the generation of this monoclonal antibody, and immunoractive fragments thereof, which are directed against non-immunodominant epitopes on the CA IX extracellular domain. As such, this antibody can be useful diagnostically as a marker for preneoplastic/ neoplastic tumours, immunodetection methods and immunotargeting approaches. Accordingly, compositions exhibit cytostatic activity and are useful in the diagnosts, prognosis and treatment of various cancers including breast, bladder or lung cancer, in tumour therapy and in anti-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 200

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                    This invention relates to a novel soluble form of the carbonic anhydrase IX (CA IX) (or MN) protein or CA IX polypeptide which is released from precancerous and/or cancerous cells of a vertebrate into a body fluid. The invention may be useful for the development of compounds with a cytostatic activity or a vaccine whilst the disclosed sequences may be used for gene therapy. The protein and method are useful for screening, diagnosing or prognosing diseases associated with abnormal expression of carbonic anhydrase IX protein, such as precancerous and cancerous diseases like renal cell carcinoma, breast cancer or colorectal cancer. The monoclonal antibody may also be used for treating or preventing precancerous and cancerous diseases. The present sequence is that of the gene which encodes the human MN protein of the invention.

                                                                                                                                                                   S
                                                                                                                                                                                                                                                  The present invention describes a method (M1) for screening for an anti-
CC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC to mprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC to ABL70110), or is at least 95% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening an
CC anti-neoplastic agent, and can be used for producing a product which is
CC anti-neoplastic agent, and can be used for producing a product which is
CC anti-neoplastic agent, and can be used for producing a product which is
CC anti-neoplastic segent, and can be used for producing a product which is
CC anti-neoplastic agent, and can be used in the treatment of cancer such
CC properties of the agent. M1 can be used in the treatment of cancer such
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, cidear cell
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
CC tumour
                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                       문
                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a method (M1) for screening for an anti-
cc neoplastic agent. The method involves exposing cells to a chemical agent
to be tested for anti-neoplastic activity, determining a change in
cc expression of at least one gene (I) of a signature gene set, where (I)
cc comprises a sequence (S) selected from 8447 sequences (given in ABL61664
ct oABL70110), or is at least 95% identical to (S), where a change in
cx expression is indicative of anti-neoplastic activity. (I) has cytostatic
cactivity and can be used in gene therapy. M1 can be used for screening an
canti-neoplastic agent, and can be used for producing a product which is
ct the data collected with respect to the anti-neoplastic agent as a result
cof M1, and the data is sufficient to convey the chemical structure and/or
cproperties of the agent. M1 can be used in the treatment of cancer such
cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
                                                                                                                                                                                                                                                                                                                                               Matches 1522;

The present invention describes a method (MI) for screening for an anti-
CC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABL6164
CC to ABL70110), or is at least 95% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. MI can be used for screening an
CC anti-neoplastic agent, and can be used for product which is
CC the data collected with respect to the anti-neoplastic agent as a result
CC of MI, and the data is sufficient to convey the chemical structure and/or
CC properties of the agent. MI can be used in the treatment of cancer such
CC as colon, breast, stomach, lung, thyroid, ossophageal, ovarian, kidney,
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match 100.0%;

CC neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in CC expression of at least one gene (I) of a signature gene set, where (I) CC comprises a sequence (S) selected from 8447 sequences (Given in ABL61664 CC to ABL70110), or is at least 95% identical to (S), where a change in CC expression is indicative of anti-neoplastic activity. (I) has cytostatic CC activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is CC the data collected with respect to the anti-neoplastic agent as a result CC of MI, and the data is sufficient to convey the chemical structure and/or CC properties of the agent. MI can be used in the treatment of cancer such CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, CC prostate or panoreatic cancer, adenocarcinoma, carcinoma, clear cell CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's

                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                           The invention relates to a method for detecting a lung cancer-associated transcript in a cell from a patient, comprising contacting a biological sample from the patient with a polynucleotide that selectively hybridises to a sequence that is at least 80 % identical to a gene that exhibits increased or decreased expression in lung cancer samples. Lung cancer-associated polynucleotides and polyperides are used for identifying a compound that modulates a lung cancer-associated polypeptide, for cancer in a patient and for treating a mammal having lung cancer by administering a modulatory compound identified. The methods are useful for treating lung cancer, such as small cell lung cancer, non-small cell lung cancer or other benign or precancerous lesions, e.g. atelectasis, complement, bronchitis, chronic obstructive pulmonary disease, fibrosis, hypersensitivity pneumonitis, interstitial pulmonary disease, fibrosis, bypersensitivity pneumonitis, interstitial pulmonary disease, fibrosis, asthma and bronchitectasis. The genes, polynucleotides and polypeptides are useful for diagnostic purposes and as targets for screening for therapeutic compounds that modulate lung cancer, such as antibodies. Sequences and astargets for screening for therapeutic compounds that modulate lung cancer, such as antibodies.

```

The invention relates to a method for detecting a lung cancer-associated transcript in a cell from a patient, comprising contacting a biological sample from the patient with a polynucleotide that selectively hybridises to a sequence that is at least 80 % identical to a gene that exhibits increased or decreased expression in lung cancer samples. Lung cancer-associated polynucleotides and polypeptides are used for identifying a compound that modulates a lung cancer-associated polypeptide, for inhibiting proliferation of a lung cancer-associated cell to treat lung cancer in a patient and for treating a mammal having lung cancer by administering a modulatory compound identified. The methods are useful for treating lung cancer, such as small cell lung cancer, non-small cell lung cancer or other benign or precancerous lesions, e.g. atelectasis, emphysema, bronchitis, chronic obstructive pulmonary disease, fibrosis,
